Merging Technologies Sony P2 Slave implementation chart: Overview

This document describes how Pyramix, VCube and VT behave when RECEIVING Sony P2 commands Details about commands SENT by these devices are described in document 'Merging SonyP2 Master'

- O The command is fully supported and returns requested data when asked for
- X The command is not supported but can be redirected to another machine
- # The command is not supported and NAK Undefined command is sent back
- The command is not supported but an ACK is returned even it is not redirected to another machine
- The command behavior depends on some internal settings. More precise information is available in the "Details" page
- The command is not specified by Sony but is supported anyway.

Merging Technologies Sony P2 Slave implementation chart: Details

06			
00.0C	LOCAL DISABLE		
00.11	DEVICE TYPE DECLIFET	The Pyramix returned Device ID Data is F0B2 by default. Hovewer any other Device ID may be set in the settings. Moreover "Extended Device ID" may be activate in the settings allowing reporting some additional information like number of tracks and the device number (usefull when multiple Pyramix need to be differenciated)	The VCube returned Device ID Data is F0B0 by default. Hovewer any other Device ID may be set
00.11	DEVICE TYPE REQUEST		
00.1D	LOCAL ENABLE		
10.01	ACK		
11.12	NAK		
20.00	STOP	If the settings "Process only Edits" is set and the settings "Process Stop Anyway" is not set, this command is not processed. If Pyramix is in chasing (LTC, STC, VITC) and the settings "Safe chase is set" this command has no effect.	
20.01	PLAY	If the settings "Process only Edits" is set , this command is not processed. If Pyramix is chasing the command has no effect.	
20.02	REC	If the settings "Process only Edits" is set , this command is not processed.	
20.04	STANDBY OFF		
20.05	STANDBY ON		
20.0D	DMC START		
20.0F	EJECT		
20.10	FAST FWD	If the settings "Process only Edits" is set , this command is not processed. If Pyramix is chasing the command has no effect.	
20.20	REWIND		
2X.11	JOG FWD	If the settings "Process only Edits" is set, this command is not processed. When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set"	When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set"
2X.12	VAR FWD	If the settings "Process only Edits" is set, this command is not processed. When speed 0 is received, it stops the machine if the settings "interpret Jog(0) as a stop is set". If Pyramix is chasing the command has no effect. Max speed is 3x	When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set". Max speed is 3x

		1	,
2X.13	SHUTTLE FWD	If the settings "Process only Edits" is set, this command is not processed. When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set". If Pyramix is chasing the command has no effect. Max speed is 50x	When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set". Max speed is 50x
		Kuba asuta na IIBaanaan aska Estitali ta	
2X.21	JOG REV	If the settings "Process only Edits" is set, this command is not processed. When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set"	When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set"
		If the settings "Process only Edits" is set, this command is not processed. When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set". If Pyramix is chasing the command has no effect. Max speed is 3x	When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set". Max speed is 3x
2X.22	VAR REV		
		If the settings "Process only Edits" is set, this command is not processed. When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set". If Pyramix is chasing the command has no effect. Max speed is 50x	When speed 0 is received it stops the machine if the settings "interpret Jog(0) as a stop is set". Max speed is 50x
2X.23	SHUTTLE REV		
20.30	PREROLL	If the settings "Process only Edits" is set, this command is not processed. If Pyramix is chasing the command has no effect.	
24.31	CUE UP WITH DATA		
20.34	SYNC PLAY		
20.37	CHASE ON		
		If the settings "Process only Edits" is set, this command is not processed. If Pyramix is chasing the command has no effect.

CX 4A	EXTENDED PLAY COMMAND	Command introduced by SoundMaster for a better ProTools Control. This command allows to quickly synchronize Pyramix in playback (reverse), enter/leave Record mode, Goto, and mute the audio. Implemeted in Pyramix 7 and verified by Collin Broad	

Merging Technologies Sony P2 Slave implementation chart: Notes

If the checksum of the received command is not valid a NAK check sum command is returned

The details page describes the required conditions for the command to be executed. However depending of the status of the Pyramix and/or Vcube application at a given time, a particular command may not be executed at all. Example: a record command is received but no capture destination folder was properly set.

Merging products are hard-disk based computer products, and as such are not forced to take into account the Colour Frame Sequence of a Video stream (useful for edits). So in order for the SonyP2 controlled devices to lock correctly, they must have their Colour Framing mode disabled (2F).

Jog command needs the "Auto Jog on move" settings activated in order to jogging Pyramix when Jog data are reveived. The print screen below shows where this setting is availble

When Pyramix is syncronize and a play command is sent, the Lock bit is reported as well. However Pyramix takes 2 frames in order the lock to the video reference become effective. During this time a short mute in the audio may be eared. Extended playback command introduced in Pyramix 7 avoid this audio mute
